Behind the Grille wiring Addendum

***** VERY IMPORTANT! READ BEFORE STARTING *****

Your kit comes with a new plug n play harness for the Windshield Washer PUMP. It is the one with the black connector. DO NOT cut that harness off when you get to step 8. If you don't mind having your windshield washer fluid level low warning light on, you can skip step 8 all together and simply use the supplied Pump Harness to extend the wiring to the pump.

We are working on getting the right connectors to offer a plug n play harness (white connector) for the Windshield washer level indicator. Should you choose to wait until that harness is available, you should not cut and splice the wiring for the sensor.

If you choose to splice the extension into the level sensor harness (white connector), the wire, connectors and sleeve are provided in your kit.

Thank you,
